

**Figure 3.** Estimated Hazard Ratios (shown on a log scale) for each potential risk factor from a multivariable Cox model. Obese class I: 30-34.9kg/m<sup>2</sup>, class II: 35-39.9kg/m<sup>2</sup>, class III: >=40kg/m<sup>2</sup>. OCS = oral corticosteroid. All HRs are adjusted for all other factors listed other than ethnicity. Ethnicity estimates are from a separate model among those with complete ethnicity data, and are fully adjusted for other covariates
